

Fell Dyke Community Primary School

Oral Health Policy

Introduction

Child oral health has been improving and far fewer children experience tooth decay than they did 30 years ago. The earlier a good oral health routine can be put into place the better. If we teach children the importance of tooth brushing, keeping sugary snacks and drinks till mealtimes and dental attendance they are more likely to follow this on into adulthood.

Oral health is an integral element of general health and well-being. Good oral health enables individuals to communicate effectively, to eat and enjoy a variety of foods, and is important in overall quality of life, self-esteem and social confidence. Oral diseases are largely preventable but no easy or quick fixes exist to promote oral health. Interventions need to be developed that will achieve sustained long term improvements in oral health. Pain, discomfort, sleepless nights, limitation in eating function leading to poor nutrition, and time off school due to dental problems are all common impacts of oral diseases.

Despite the general improvement in oral health there remain very marked inequalities in oral health. People living in areas of material and social deprivation have much higher levels of tooth decay. They are more likely to have diets high in sugary foods and drinks and they brush their teeth less often. Vulnerable groups of society also have poorer oral health and less access to oral health care services. For example, people with learning disabilities and people with mental illness tend to have fewer teeth, more untreated decay and more periodontal disease than the general population.

The most common oral diseases, tooth decay and periodontal disease can both cause pain and infection as well as eventual tooth loss. Acute dental infection can cause swelling and sever pain and in extreme cases can be life threatening. Chronic infection also tastes and smells unpleasant. Dental treatment has become much more acceptable due to advances in technology and behaviour management techniques. However, extensive treatment can still be stressful, especially for young children. Many children still have teeth extracted under general anaesthetic, a distressing experience and an avoidable, albeit small, risk to life.

This policy advises staff and parents on the basic standards that should be adopted to maintain good oral health in school.

Rationale

As part of the ongoing work in Fell Dyke School we follow guidelines for healthy teeth. The guidelines we have to promote the importance of good oral health and encourage habits conducive with this are:

We only offer milk and water to drink at snack times

Use of water bottles and drinking fountains are encouraged during the school day and some children can have milk. No juice is given at snack times. We do not allow fizzy drinks and energy drinks in school or on educational visits.

We only offer healthy snacks to eat

Children offered fruit as part of fruit in schools scheme. No dried fruit should be given as a snack. All snacks during the day should be sugar free.

We do not allow sweets or confectionery on the premises or in the playground and do not use sweets as a reward.

Sweets are not given as a reward. Children are rewarded with stickers and house points. Children are not allowed to bring chocolate bars, sweets or confectionary into school.

We take part in dental health activities

An oral health promoter from STFT has been allocated to our school to work with children staff and parents to encourage oral health routines. Support will be offered as part of teaching sessions, resources and guidance.

We promote positive oral health messages in school

The school discourages cakes, sweets and confectionery as part of birthdays or celebrations, if part of a celebration i.e. Christmas parties, we encourage savoury before sweet.

Regular Dental Care

It is very important that children have regular dental examinations starting as young an age as possible. Visit or phone the practice of your choice and ask if they are happy to see your child under the NHS. You are not obliged to stay at the same dentist and can change practice if you want to, however it is getting increasingly difficult to find an NHS dentist.

If you have any problems finding an NHS dentist or you would like further advice on NHS practices you can contact:

NHS 111

Tel: 111

www.nhs.uk/111

NHS Choices

Tel: 0300 3112233

www.nhs.uk

Alternatively the Community Dental Service from South Tyneside Foundation Trust covering Gateshead, South Tyneside and Sunderland provide a full range of treatments for patients of all ages who have difficulty in accessing treatment from general dental services. Dental care is provided, on referral and by appointment only for patients with a wide range of special needs. This will include; individuals who are medically compromised or have mental health issues; adults and children with severe learning disabilities or physical disabilities and children with behavioural management issues. This care includes routine care, specialised clinical services in paediatric dentistry, sedation and general anaesthesia in a hospital setting.

Patients who fit the referral criteria can be seen following a referral by a health or social care professional, care provider or voluntary organization. Self referrals from those fitting the referral criteria will also be accepted.

Guidance on Nutrition & Drinks

A balanced diet for children will include food from each of the four main food groups:

Bread, potatoes and other cereals

Fruit and vegetables

Milk and dairy foods

Meat, fish and alternatives such as pulses and tofu

Eating a healthy balanced diet which contains plenty of fruit and vegetables and is low in fat, salt and sugar and, based on whole grain products is important for promoting good general health. Children need to eat regularly, and so nutritious snacks between meals are an important part of the day. The best snacks to serve should be sugar free and so aren't likely to cause tooth decay, and a healthier options prove popular with children and gives them a chance to sample foods not always served at home.

Ideas for nutritious snacks include:

Peeled and chopped fruit and vegetables

Any type of bread including sandwiches (healthy fillings)

Dairy foods such as cheese or plain yogurt with added fruit

Crackers such as water biscuits, plain breadsticks and cream crackers

Crumpets, savoury muffins, toasted fingers with cheese spread, pitta bread with Homemade dips

Homemade plain popcorn

Nuts, dried fruit, crisps and highly processed puffed starchy snacks are not recommended snacks.

This is because:

Whole nuts can cause choking and some children may suffer from nut allergies

Dried fruit whilst good as a pudding after a meal should not be given as an in between snack; this is due to the sugars that they contain and their sticky consistency

Crisps are fine for occasional treats, but because of the fat and salt content, are not ideal as a daily item

Highly processed starchy snacks are as salty as crisps and because the starch in them is finely ground up, they may damage teeth if eaten often.

The safest drinks for teeth, between meals are milk and plain water. Water is an ideal choice for quenching thirst at any time. Chilling or adding ice can increase its appeal to children. Tea, coffee, fizzy drinks and juices both the regular, 'diet', and no added sugar varieties should be avoided altogether. Read labels carefully for hidden sugars and remember even though it may say no added sugar, this simply means that no more sugar has been added.

Artificially Sweetened Foods and Drinks

Manufacturers have produced a wide range of foods, confectionery and drinks that contain an artificial sweetener rather than, or in addition to, sugar. You may see these listed on food labels as:

Sorbitol – Xylitol – Aspartame - Acesulfame K - Saccharin

Artificial sweeteners if consumed in large amounts can have a laxative effect on children. In addition, given artificially sweetened drinks may encourage a 'sweet tooth' which could cause problems with tooth decay later in life.

Birthdays & Celebrations

Birthdays and celebrations are an important part of a child's life, during school time as this may be the only opportunity the child may have to celebrate his or her birthday. Children are allowed to bring fruit, small toys or gifts to share with other children in their class or year group.

Fell Dyke do not allow birthday cakes, biscuits or sweets as part of its oral health policy. Parents are made aware of this through the school policy on the website and when they start school in nursery or reception.
